The beginning and ending of Termes

Hilary { The first of *Hilary* Term shall be / On *January* the twenty three / And on the twelfe of *February* / This Term doth end most certainly. } Term.

Easter { And *Easter* Term from *Easter* day / The Wednesday fortnight 'gins alway: / And when the *Ascension* day is past- / Till monday next this Term doth last. } Term

Trinity { On Friday after Trinity, / This Term begins assuredly: / And as our Lawyers all doe write, / It ends the Wednesday fortnight. } Term.

Mich. { If *Michaelmas* Term you seek to finde / The twentie third of *October* minde / It ends, as I doe well remember / The twenty eight day of *November*. } Term.

Short lines be the Terms commence and ending: Long time cares, turmoils, spend-

The Anatomy of Mans body, as the parts thereof are governed by the twelve Signes.

♈ Head and face.

♉ Necke and throat.

♋ Breast, stomacke, and ribs.

♍ Bowels and belly.

♌ Secret members

♑ Knees

♊ Armes and shoulders.

♌ Heart and backe.

♎ Reines and loynes

♐ Thighes.

♒ Legs.

♓ The feete.

SHould I but dare to omit the Anatomy,
which long enough hath gulld my countrey friend,
He with contempt would straight refuse to buy
this book, and 't is no Almanack contend.
Ask him its use, he'll say he cannot tell;
No more can I, yet since he loves 't so well,
I'll let it stand becau se my book should sell.

Reader

Reader, would'st know when Easter here will fall,
What's sunday letter, when will be leap-yeare,
The Golden number, and the new moons all
In February; here's right under here.
By their resp ctive titles do appeare.
Also Vermilion-figures shew at Rome
How much before our Easter there doth come.

The use of the two former Tables.

IN the first table, and the first columne or space, you have the yeare of our Lord, beginning 1601, &c.

In the next space, the Golden number for every yeare, as for 1601 the Golden number 6, &c.

In the third space, the day of the change of the moone in February *as in 1601 the moone changed* February 22.

In the fourth space, how Easter-day *falleth every yeare; as in 1601* Easter *was* Aprill 12.

In the fifth space, the number of day's differing betwixt the Romane *or* Gregorian, *and our account in* England, *for the keeping of* Easter *(and so by consequence all other moveable feasts thereon depending;) as in 1601 there was no difference, but in 1602 the* Romanest *kept their Easter 7 dayes before us; and in 1603 the* Romanes *kepe their* Easter *35 dayes, that is, five weeks before us.*

And in the last two spaces you have the Leap-yeare, and Sunday letter*) as in 1601, 1629, and 1657, the Sunday-letter D, and the first after Leap-yeare, &c,*

The use of the second Table.

In this second table you have in the first place Sunday-letter and in the next the Golden number whatsoever it be, from 1 to 19. inclusive.

The use whereof is, that for any yeare, you knowing the Golden number, and Sunday-letter may there find the moveable Feasts.

Example.

By the first table against the yeare 1646. I finde the Golden number, 13, and the Dominicall letter D; then in the second table and in the space answering D, I seeke for the Golden number 13 which I finde in the second line of that table, answering D, and against it in the same line, from Christmasse to Shrovesunday is 6 weekes and 3 dayes: Shrovesunday February *8, Easter-day* March *29 Rogation sunday* May *23 Whitsunday* May *17, Advent-sunday* November *29, the like for any other yeare.*

Note that each King began his raigne at the same time that the next precedent King ended his.

The soure quarters of this yeare 1649

European moneth	Persi moneths	Arabian moneths	Etyiopian moneths
March	*Pharavardin*	*Ramachau*	*Pahmahath*
April	*Adarpahasct*	*Sheu all*	*Parmade*
May	*Charda*	*Dhilkade*	*Pascimes*

The beginning of the Spring quarter, is accounted of the Astrologers as the time of the yeares birth: I wil therefore with it, although something diverse to the comon path. It begins with us the ninth day of march, 37 minuts past 8 in the morning.

The Sun then entering the first points of Aries, making the day and night equall to us, as to all the world. the temper of this quarter ordinary and of course is hot and moist of complexion sanguine, & is the yeares youthfull, & growing age, lasting while the sun runes his course through Aries; taurus and Gemini. The state of the weather, as it depends upon the sunns course to the fixed stars (& which would bt constant, were there no intervention of other causes) is first dry: the sun having passed the section of the Equator with the Eclipsique, draws neer to some hotter stars, and being neartr our zenith, both exhales and consumes, the reliques of winters superfluiti, helped by the Eastern winds, which then ordinarily blow. Hereby the earth is fit to receive the seeds that remaine to be sown, & is also eresmulated to generation the trees thrusting forth buds, blossomes, leaves, & the earth bearing it in her emerauld, like vest, embellished and adorned with varietie of

The santhemion spangles : all which with corne an fruits also, needing a present irregation, oppertunely, th sun in taurus, is accompanied in his morning-rising, wit the Pleiades and Hyade, toward the North; the Hedi to ward the south: & soon after also Orion, waited upon all to bed with Acturus. Which being tempestuous, storm y moist, conscollationa stirre up, and bring those pleasin showers, which being warmed by Southerly and Favonia winds, are welcome to the tender and newly rooted-plant Lastly the sunne in Gemini approaching his height, stir up a temperare heat, convenient to the increasing of fruit and plants.

The Summer quarter

June.	*thir*	*Dhilbaga*	*Peuni*
July.	*mardod*	*Mubaram*	*Epip*
August	*Saberise*	*Sefar*	*musri*

The Summer quarter takes his beginning (according to the account of astronomers) with the suns enterauc into the first point of of the solstitiall signe Cancer bein with us the 11 day of Iuue at 40 mi before 1 in the mort Now are the dayes the longest and the nights the shorte & all that dwell on this side the Equator, the day bein with us at Cambridge 16, houres 38 min. 36 seconds, Th temper of this quarter is naturally hot and dry, of com plexion chollerick. The sun being now ascended to hi height, hath likewise with him brought all the earths fu enitnres thir to seberall tropicks.

now

Now herbs begin to forme their seeds, and the fading flowers are succeeded by their fruits, and therefore need moisture to further their increase to their iust quantitie. Fily now the Aselli in ♋ rising with the sun stirres up showres to satisfie them with the latter raine: by the help whereof having seen their greatest, and now requiring heate for their full maturation, the sunne enters the fire-breathing ♌, and is also accompanied with the morning rising of both the dogs, *Sirius* and *Procion*; whereby is stirred up great heate, to the hardning of graine, and ripening of all other fruits (which yet is something tempered by the concomitancy of the Etesian winds. By this time the sunne being come into this terrestiall signe Virgo the heat is abated; and the ayre though still dry, yet cooler, that the husbandman may with more ease discover the fields, and furnish his barnes. Lastly, this long dry now calling for moisture, the sunne approaching to tempestuous and storm-breeding Bootes, by his morning rising with him, poures out store of raine to fill the chops of the dry and gaping earth.

The Autumnall quarter.

September	*Mehar*	*Rabie*	*Tuth*
October	*Aban*	*Rabie Posterior*	*Palh'*
November	*Adar*	*Gammadbi*	*H'tur*

The autumnall quarter begins with the sunnes entrance into the other equinoctiall signe Libra, which is the twelfe day of September, at 13 minutes after 3 a clock in the after-noone; making againe equall ebtry day and nig

night to all the world: habing spent on this side the Equator 117 dayes, 6 houres, 36 min 11 sec The qulities now predominant are cold and dry, like to the complexion melancholly, a declinining state of man, now husbandmen in their endles circle begining to provide for the crop of the following yeare, have their land prepared by some few showers caused by the moruing letting of the Pleiades Hyades, and Oriom, which moisture, lest it should hurt the new-sown graine and spronting blade by the sudden approach of cold the sunne while he passeth through a signe of qualitie hot and fiery, both (as he can according to his distance from us) draw out the residue of it, and setteth the the earth for the entertainmenment of the cold.

Winter quarter

December	*Di*	*Gumadki 3.*	*Cebino*
Jauuarie	*Behemen*	*Regab*	*tuba*
Eebruary	*Asphandar*	*Scobam.*	*Amschit*

WInter quarter begins at the sunns entrance into the trophicall signe Capricorn, which he doth the 11 of December at 17 minutes past two in the moruing, makeing theu the shortest day and lougest night to all on this side the Equator: the day with us at Cambridge being 7 hours 25 min 24 sec. The temper is now cold and moist, phlegmatick: elike to our decrepit star; in both much superfluous

humours

humidity doth abound. The earth seems now to lie still and to be quiet, that it may recover the strength spent in the last summers productions: wanting a richer, it is oft robed with a vest of snow, which yet is observed not seldome to promise insuing plenty, toward the end of the quarter. The sunne approaching in Pisces, accompanied with some warmer westerne winds, prepares the earth tu entertaine the over-welcome Spring,

Under the spangled vault the starrie sphere,
If *Titans* course should onely every yeare.
The weathers temper change, then plainly we.
The next yeares weather might in this forcsee.
Comhare two yeares, and the but little want.
But the same day same starres are culminant:
Their risiing, setting, on the same day fall,
Acronique Cosmique, and *Heliocall*.
This constancie would yeeld t' no mutations,
Did not the Planets oft consociations
Their power interpose: by whose aspects
I'th' heaven are caus'd those various chang'd effects.
Their various course ir such, so strange their race
The errth ne're saw them twice unchange in face:
This *Protean* mixture of the seven together,
Will cause a *Protean* daily change of weather.

to know the time of the tides in a more exact and eady manner, then heretofore hath been set forth by any. the use followeth.

Dayes after the Change or Full; the Moon is South at

0	1	2	3	4	5	6	7
12	12 48	1 36	2 24	3 12	4 0	4 48	5 36

Dayes after either of the Quarters, the Moon is South at

0	1	2	3	4	5	6	7
6	6 48	7 36	8 24	9 12	10 0	10 48	11 36

First find the new Moon, Full, and Quarter, in the Kalender; then count how many dayes are past either of those: & under the same number of dayes past, you shall here see the time that the Moon will be South the same day: then look for the haven or port you desire, and where the houres and quarters stand before the same, there it is high water so many houres and 5 quarters before the time above found: but where the houres end quarters stand after the place, there it is high-water so long after the time first found. *As for example.*

the Moon being five dayes past the change, and so 5 dayes old, I finde in the table, that five dayes after the change the Moon is South at 4 a clocke, when makes full sea at *Quinborough, Southampton*, &c. but at *Yarmouth, Dover, Harwich* an houre and a half sooner, that is at two a clock and 30 min. but at *London, Tinmouth*, and *Amsterdam*, three hourts after that is, at 7, a clock.

Of the eclipses happening this yeare.

THere will be five Eclipses this year, three of the Sunn, and two of the Moon: Both those of the Moon and one of the Sun may be seen of us in England. The first of the Moon is on the 16. day of May, beginning about one in the morning, and lasteth 4 hours 30 minutes. The nert is of the Sun October 25, beginning 15 minutes past one after noon, and endeth neer three. The other of the Moon is Novemb. 9. beginning 39 min. past 4 in the morning, and ends nær nine.

How to behold an eclipse of the Sunne without hurt to the eyes.

TAke a burning glasse, such as men use to light tobacco with in the sun; or a spectacle glasse that is thick in the middle, such as is for the eldest sight; and hold this glasse in the sun as if you would burn through a pasteboard or white paper book, or such like; and draw the glasse from the board or book, twice so far as you do to burn with it. So by direct holding it nearer or further, as you shall see best, you may behold upon your board, paper, or book, the round body of the sun, and how the moon passeth between the glasse, and the sunne during the whole time of the eclipse. This mayest thou practice before the time of an eclipse, wherein thou shalt discern any cloud passing under the sun; or by another putting or holding a bullet or his fingers end betwixt the sun and the glasse at such time (the sun shining) as thou holdest the glasse as before thou are taught.

To finde when the Moone shall be eclipsed and when not by her distance from either of the two sections called the head and tail of the dragon, thus noted ☊ ☋.

IF the moone at the time of her true opposition to the sunne, shall be distant from either of these two points, lesse then 16 degrees, 21 minutes, and 20 seconds, then must the moon suffer an eclipse,

But if her distance (as before) be more then 13 degrees, 5 minutes and 23 seconds, then the moone at that full, cannot be eclipsed,

Therefore if her distance be more then in 10 degrees, 21 minutes, 20 seconds, and lesse then 13 degrees, 5 minutes, 23 seconds, then she may happen to be eclipsed, but not necessarily.

To finde when the sunne shall be eclipsed and when not.

IF the apparent laritude of the moou at the time of the visible conjunction be lesse then 30, minutes, 40 seconds, the must be an eclipse.

But if the apparent latitude of the moon be more then 34 minutes, 51 seconds, there cannot be an eclipse.

Therefore if the apparent latitude be more then 30 minutes, 40 seconds, and lesse then 34 minutes, 51 seconds, there may be an eclipse.

stronomicall Elections &c. briefly described for administration of Physick and Phlebotomies

As in all other parts of Phisick, so in phiebotomie, or letting of blood, first skilfully and circumspectly is to be consid-ed and certainly known the cause: As whether it be needfull d good to the patient, as that it be to purge the body of some naturall, naughtie, and superfluous humour, For otherwise ting of blood is very dangerous, and openeth the way to ma gridvious infirmirmities. And note generally, that it is not nvenient, either for a lean and weake man, or for a very fat d grosse man to be let bloud, neither for a child under 14 ares of age, nor an old man above 56.

Now there remaineth to be considered, how it staneeth with e patient inwardly, for his complexion and age; and out-ardly, for the time of the yeare, time of the day, and diet.

For the complexion: Let blood the { Phlegmatick, Melancholick, Cholerick, Sanguine } The Moon being in { *Aries* or *Sagittarius*, *Libra* or *Aquarius*, *Cancer* or *Pisces*, either of these.

For his age, Let blood in his. { Youth, from the change to the first quarter, Midle age, from the first quarter to the full, Elder age, from the full to the last quarter, Old age, from the last quarter to the change,

The time of the Yeare,

Spring good, Harvest indifferent

For the time of the Month,

Let not blood { The moone in *Taurus*, *Gemini*, *Leo*, *Virgo*, or *Capricor*, The day before not after the change and full, Twelve houres before and after the quartiles, The moone with *Jupiter* or *Mars* evill aspected,

the time of the Day

Morning after sun-rising, fasting, after nosn, after perfect digestion: the aire temperate, the wind not south,

Diet after bleeding.

Sleep not presently, stirre not violently,
Use no venerie, Feed thou warily.

Notwithstanding, for the phrensie, the pestilence, t Squinancy, the Plurisie, the Apoplexie, a continuall Heada growing of choler or bloud, a hot burning Fever, or any oth extreame pain, in this case a man may not tarry a chosen tim but incontinently, with all convenient speed, he is to seek h remedie: but then bloud is not to be let in so great a quanti as if a chosen time might be respected.

Here follow certaine profitable rules and tables exactly calculated by *Edward Pond*, fitting for all men, that use any trade of buying and selling, &c.

A speciall note and generall rule, to be observed in the use of these insuing tables.

IN every of the 5 tables whensoever your question is of a greater summe then is therein contained, do but lay down with your pen or counters the summe found in the table, so often as will make up the summe propounded.

Example.

By the former example upon the use of the second table, where one pound in 30 yeares is worth 10 pounds, one shilling and foure-pence-farthing; thereby it plainly appeareth, that 5 pounds shall be worth 5 times of much, and ten pounds worth ten times so much as one pound is worth; viz. ten pounds at 30 yeares end will be worth an 100 pounds, 13 shillings, fixe pence, half-peny, at 8 in the hundred

the

The uſe theſe five tables following, by

Edward Pond, at the rate of 8 in the hundred

THhe fiirſt table ſhewes the yearly intereſt of any ſumm from one ſhilling and upward, unto 10000 pound, eith by pen or couuters, onely by addition.

Example. For the uſe of 17 pounds and 17 ſhillings: by t tabe I ſee that the yearly uſe of 10 pounds, is 16 ſhillin and of 7 pound is a 11 ſhillings 2 pence. 1 qart. and of ſhillings, is one ſhill. 4 pence, 1 quar: all theſe added togeth make one pound, 8 ſhillings, 6 pence halfe penie.

The ſecond table ſheweth what any ſumme put out f any terme under 31 yeares will be in the end, accountin compound intereſt.

Example. One pound put out for 30 yeares, is worth ten pounds, 1 ſhill. 3 pence qu to be paid at the end of 30 yeares.

The third table ſheweth what any ſumme due to be paid any term of yeares under 31, is worth in readie money.

Example. One pound due to be paid at the end of 30 yeare is worth in readie monie 1 ſhill. 11 pence halfpenie, farthing.

The fourth table ſheweth what any ſumme, being an annu tie or yearely rent to indure any term of yeares will be wort all to be paid at the end

Example. One pound annuity yearely due to be paid, durin the term of 30 yeares, and all forborn untill then, will be the worth 13 pounds, 5 ſhillings 7 pence, 3 farthings.

The fifth table ſheweth what any ſuumme, being an annui tie or yearely rent, to indure any term of yeares, or a lea for any term of yeares to come, under 31 is worth in readi money, the clear yearely rent being known.

Example. A leaſe or annuity of one pound yearly to be pai during 30 yeares, is worth in readie money 11 pounds 5 ſhil lings, one pennie, three farthings.

Table

interest of sum, from shilling up d due for a, at 8 pound centum per num.				YEERES.	If 1 pound be put out for 3 yeers or under interest and interest upon interest to be piad at the end				If 1 pound due at 30 yeers or under, what is it worth ie ready money.				what is 1 pound annuity for thi ty yeers, or under, worth, to be paid at the end thereof.				what is 1 pound annuity for 30 yeers, or under worth in readie money.
